

Download the Zip File

Extract it inside the **C:\xampp\htdocs**

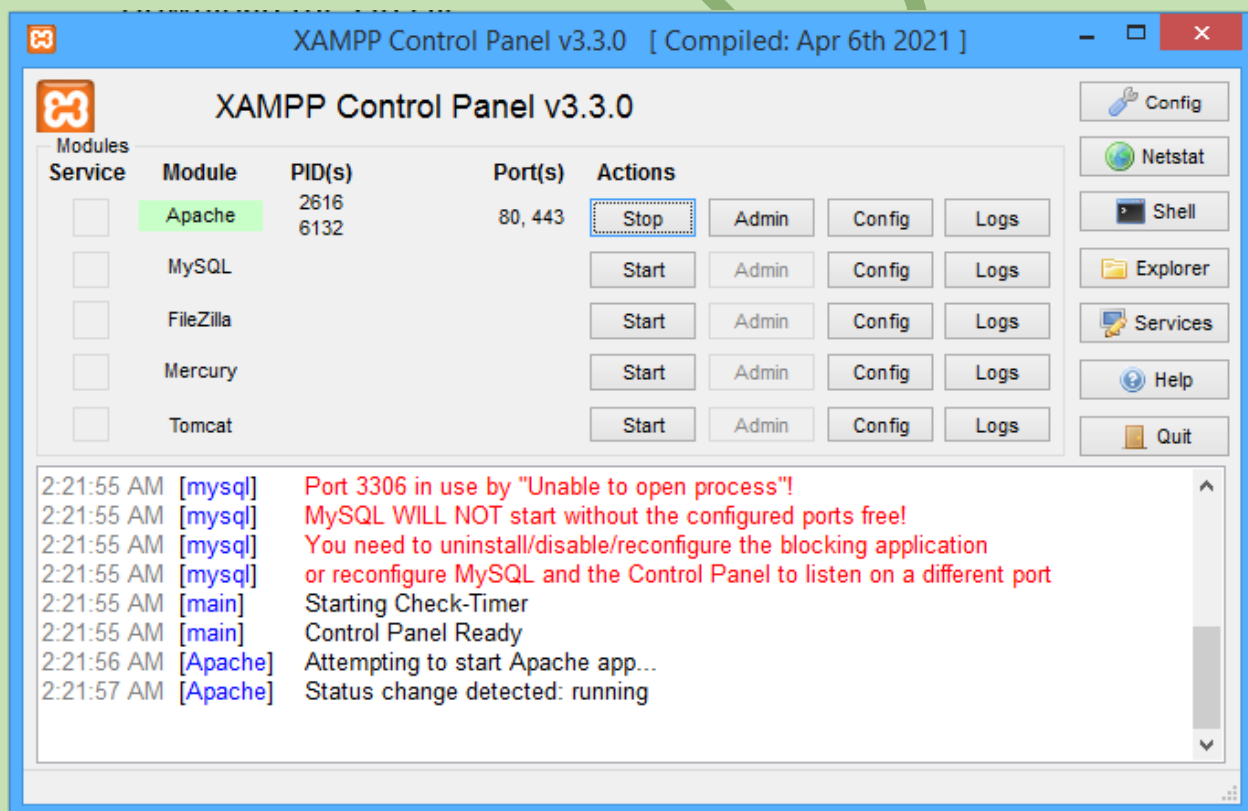

Now open “**Database**” Folder and **execute the SQL File**

Then open your application inside the **visual Studio Code**

Open “**connection.php**” and **change** your Database password

Open “**html**” folder – You can see “**connection.php**” file in there also
Change database password in it also

Then you can open your web page using Localhost: You gonna need
XAMPP software

Press **Start** Button like above and open your application in browser

You can see web application is running well

Then you have to open your database on **MySQL** or **HediSQL**

Go to **admin Table** and there you can see test@gmail.com

The email is not valid to log into the admin panel. So you **need to insert your valid email** in the table first.

After that you need to edit

1. **Admin Verification.php**
2. **Forget pass.php**

You have to give your **TRUE** Email address & app password which can get from your Gmail account

Create and use app passwords

1. Go to your Google Account.
2. On the left navigation panel, choose Security.
3. On the 'Signing in to Google' panel, choose App passwords. ...
4. At the bottom, choose Select app and choose the app that you're using.
5. Choose Select device and choose the device that you're using.
6. Choose Generate.

You **can generate app password like above** if you haven't got one

Now if you do all of these things you are one step away for getting full experience of this.

Now I used <https://support.payhere.lk/sandbox-and-testing> **payhere sandbox environment** to test my payment processes.

So you need to create sandbox account in payhere site and Generate your

1. **Merchant ID**
2. **Merchant Secret**

You can watch this video to understand how to create account in payhere and generate your above ID and secret ID

Watch this: <https://youtu.be/jJdDZR6g87E?si=J4PA8Fk0LMVWQtIZ> and you can create account and continue

Now you are all set you can work with the application and get amazing experience

Don't forget to **disable your virus protection** while sending emails...

This localhost applications are not eligible to send emails online... but we are doing it. So it's against the theory. Then if we are on protection it will catch this request as an unsafe malware and you are unable to work. Then turn off it while sending email

Need some what **good internet connection to load interfaces**

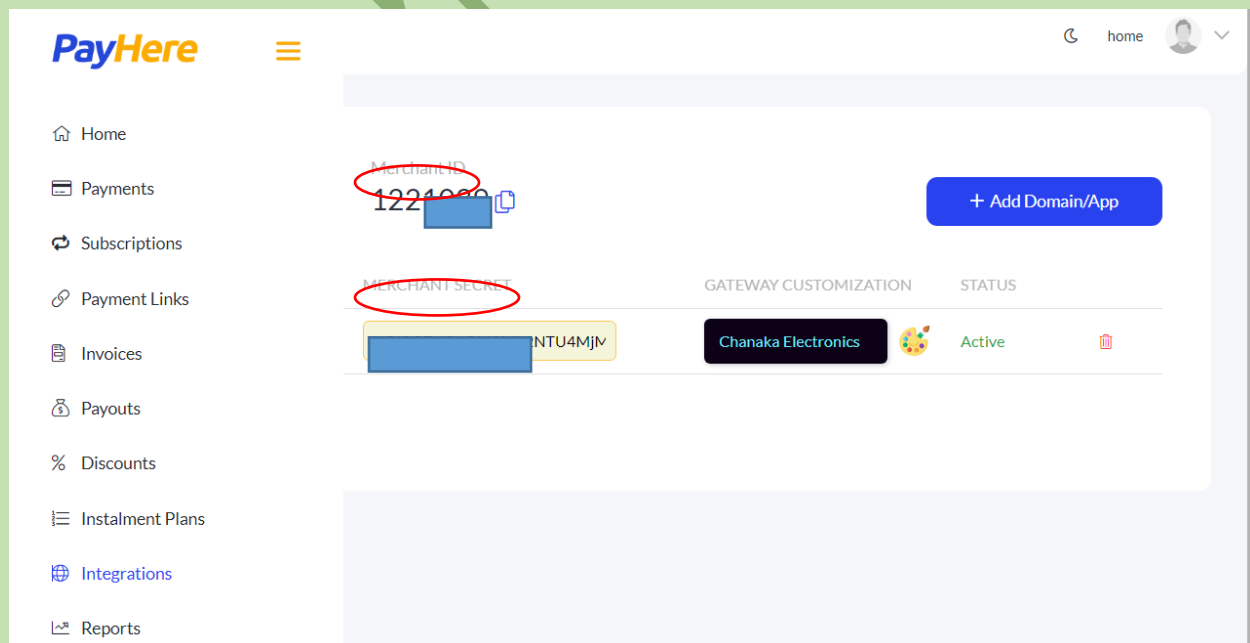

VS Code download link: <https://code.visualstudio.com/download>

MySQL Download Link: <https://dev.mysql.com/downloads/installer/>

HediSQL Download Link: <https://www.heidisql.com/download.php>

XAMPP Download Link: <https://www.apachefriends.org/download.html>

Payhere Sandbox login: <https://sandbox.payhere.lk/merchant/home>

After Creating a Sandbox account you can get **Merchant ID and Secret** from this above shown page

Green Food Store
